Personal Detail's

- ◆ D.O.B. : 22/07/2002
- ◆ Age : 21 Years
- ◆ Gender : Male
- ◆ Address : Hno. 22, Shree ji v3 Balaji greens, Amlidih, Raipur, C.G.

Objective

- ◆ App Developer [Advanced]
- ◆ Software Developer [Beginner]
- ◆ Web Developer [Beginner]

Education

- ◆ Pursuing B. Tech in "Information Technology" from "Shri Shankaracharya Institute of Professional Management and Technology, Raipur".
- ◆ 12th with 74.6% from "Sant Dnyaneshwar Vidyalaya"
- ◆ 10th with 84.6% from "Angels Valley English School"

Skills

◆ Hard skills

● Software

- Android Studio
- Blender
- Figma
- AutoCAD
- MS. Office

● Programming Language

- C/C++
- Java
- Kotlin
- Python

◆ Soft skills

- Leadership

[Team Leader for 3 national level competitions]

- Team Management

[Managed team in 4 teams' competitions]

- Guiding

[Taught IoT, Arduino and ESP8266 at AICTE

Idea lab SSIPMT in 4 days workshop]

- Communication

Experience

- ◆ **7 months** internship in Technology Group at **Automotive Research Association of India (ARAI)**.
 - Developed BLE mobile application for BMS from start to finish.
 - Worked on FCWS implementation using OpenCV (Front Collision Warning System).
 - Worked on UDS (Unified Diagnostic system).
- ◆ **6 months** internship as Android developer at **Evrex Tech Pvt. Ltd.**
 - Developed mobile application for vehicle monitoring.
 - Worked on development of 3 electric vehicles (Scooter, Bike and a Cycle) mainly at their design.

Achievements

- ◆ Won "ARAI Technovuus Mobility Hackathon 2022" in "EV data log and monitoring system" domain.
- ◆ Reached Semifinals of "Hyundai Social Creator 2021" held at Gurgaon.
- ◆ Reached Grand finale of "MM(DU) Hackaversuum 2022" held at Ambala.
- ◆ Won 1st prize in "ELEXA Model presentation competition".
- ◆ Won 3rd prize in "Mandala making competition".

Projects

- ◆ **EV data log and monitoring system:** IoT device which can be attached to any Electric Vehicle and its data can be monitored in our app via, WIFI, and Internet.
- ◆ **Variable pitch and amplitude horn system:** It's an innovative idea for reducing noise pollution, by creating variable pitch and amplitude horn by varying speed of vehicle.
- ◆ **BLE application for monitoring BMS:** Bluetooth Low Energy android app for monitoring data from Battery Management System.
- ◆ **FCWS (Front Collision Warning System):** Front collision warning system is a system that detects front collision used mainly for autonomous driving vehicle. I have developed it using OpenCV and C++.
- ◆ **Mouse for handicapped people:** Gyroscope sensor-based mouse for handicapped people.
- ◆ **Administration application for School and Colleges:** Android app for connecting Teachers, Parents and Students of institute. Worked on both server and client side.

Technical Skills

- ◆ Internet of Things
- ◆ Android Application Development
- ◆ 3D Modeling & Designing
- ◆ HTML/CSS
- ◆ Graphic Designing
- ◆ UI/UX Designing

Hobbies

- ◆ Learning new things and broadening my vision.
- ◆ Sketching and painting.
- ◆ Biking and exploring places.
